"Nucleotide sequence and predicted functions of the entire
Sinorhizobium meliloti pSymA megaplasmid.";
Proc. Natl. Acad. Sci. U.S.A. 98:9883-9888(2001).
-I. FUNCTION: This protein may play a role in the biosynthesis of the
prosthetic group of nitrogenase (Few cofactor).
-I. PATHWAY: Fe-Mo cofactor biosynthesis.
-I. SIMIARITY: BELONGS TO THE NIFD/NIFK/NIFE/NIFN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

-I- FUNCTION: This protein may play a role in the biosynthesis of the prosthetic group of nitrogenase (FeNo cofactor).

-I- PATHWAY: Re-Mo cofactor biosynthesis.

-I- SIMILARITY: BELONGS TO THE NIFD/NIFK/NIFE/NIFN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,

"Evolutionary analyses of hedgehog and Hoxd-10 genes in fish species
"Evolutionary analyses of hedgehog and Hoxd-10 genes in fish species
"Evolutionary analyses of hedgehog and Hoxd-10 genes in fish species
"In proc. Natl. Acad. Sci. U.S.A. 39:13036-13041 (1996).

"In proc. Natl. Acad. Sci. U.S.A. 39:13036-13041 (1996).

"In parterning events during development (By similarity).

"In SUBCELLULAR LOCATION: The C-terminal peptide diffuses from the cell, while the N-terminal peptide remains associated with the cell surface. Is also secreted in either cleaved or uncleaved form to mediate signaling to other cells (By similarity).

"In proc. Natl. Acad. Sci. U.S.A. 39:13036-13041 (1996).

"In parterning events during the special distribution of the protein activity to the cell surface. The newly generated N-terminal fragment (N-product). This covalent andiffication appears to play an essential role in restricting the spatial distribution of the protein activity to the cell surface. The N-product is the activity special activity (By similarity).

"In SIMILARITY: Belongs to the hedgehog family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-0CT-1996 (Rel. 34, Created)
01-0CT-1996 (Rel. 34, Last sequence update)
15-MAR-2004 (Rel. 43, Last annotation update)
Monoamine-sulfating phenol sulfortansferase (EC 2.8.2.1)
(Sulfotransferase, monoamine-preferring) (M-PST) (Thermolabile phenol sulfotransferase) (TL-PST) (Placental estrogen sulfotransferase)
FUNCTION: Catalyzes the sulfate conjugation of catecholamines, phenolic drugs and neurotransmitters. Is also responsible for the sulfation and activation of minoxidil. Mediates the metabolic activation of earcinogenic N-hydroxyarylamines to DNA binding products and could so participate as modulating factor of cancer risk.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

TISSUE SPECIFICITY: Liver, colon, kidney, lung, brain, spleen, small intestine, placenta and Leukocyte.
PTM: The N-terminus is blocked.
SIMILARITY: Belongs to the sulfotransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE=94379981; PubMed=8093002; Veronese M.E., Burgess W., Zhu X., McManus M.E., Veronese M.E., Burgess W., Zhu X., McManus M.E., that characterization of two human sulphotransferase cDNAs that encode monoamine- and phenol-sulphating forms of phenol sulphotransferase: substrate kinetics, thermal-stability and inhibitor-sensitivity studies."; Biochem. ANALYTIC ACTIVITY: 3'-phosphoadenylylsulfate + a phenol = adenosine 3',5'-bisphosphate + an aryl sulfate.

SUBUNIT: Homodimer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GO; GO:0005737; C:cytoplasm; TAS.

```

```
Oguza K., Satsukawa M., Okuda H., Watabe T.;
Submitted (MAY-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Catalyzes the sulfate conjugation of catecholamines and phenolic drugs and neurotransmitters (By similarity).
-!- CATALYTIC ACTIVITY: 3'-phosphoadenylylsulfate + a phenol = adenosine 3',5'-bisphosphate + an aryl sulfate.
                                                                                                                                                                                                                                                                                                                    Gaps

Exostosin-like 2 (EC 2.4.1.223) (Glucuronyl-galactosyl-proteoglycan 4-alpha-N-acetylglucosaminyltransferase) (Alpha-1,4-N-acetylglucosaminyltransferase) (Alpha-1,4-N-acetylglucosaminyltransferase)
Kitagawa H., Shimakawa H., Sugahara K.;
"The tumor suppressor EXT-like gene EXTL2 encodes an alphal,
4-N-acetylhexosaminyltransferase that transfers N-acetylgalactosamine
and N-acetylglucosamine to the common glycosaminoglycan-protein
linkage region. The key enzyme for the chain initiation of heparan
sulfate.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Transmembrane; Signal-anchor; Glycoprotein.

1 22 CYTOPLASMIC (POTENTIAL).

TOANGHEM 23 43 SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN)
                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                               J. Biol. Chem. 274:13933-13937(1999).
-!- FUNCTION: Glycosyltransferase required for the biosynthesis of heparan-sulfate and responsible for the alternating addition of beta-1-4-linked glucuronic acid (GLCA) and alpha-1-4-linked N-acetylglucosamine (GlcNAc) units to nascent heparan sulfate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

"Structure of two pectate lyase genes from Erwinia chrysanthemi EC16
"Structure of two pectate lyase genes from Erwinia chrysanthemi EC16
and their high-level expression in Escherichia coli.";
J. Bacteriol. 168:595-606(1986).
-!- FUNCTION: Involved in maceration and soft-rotting of plant tissue.
-!- CATALYTIC ACTIVITY: Eliminative cleavage of (1->4)-alpha-D-galact-galacturonan to give oligosaccharides with 4-deoxy-alpha-D-galact-4-enurnosyl groups at their non-reducing ends.
-!- SUBCELIGIAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the polysaccharide lyase family 1. PLADES
                                                                                                                                                                                                                                                                                                                                                                                                                               .-anchor, Glycoprotein.

16-CCT-2001 (Rel. 40, Last sequence update)
10-CCT-2003 (Rel. 42, Last annotation update)
Phosphatidylinositol-4-phosphate 5-kinase type II alpha (EC 2.7.1.149)
(PIPSKII-alpha) (1-phosphatidylinositol-4-phosphate 5-kinase)
(Ptdins(4)P-5-kinase B isoform) (Diphosphoinositide kinase).
                                                 --- FUNCTION: Probable transcription factor active in inflorescence. development and floral organogenesis (By similarity).
--- SUBCELLUIAN LOCATION: Nuclear (By similarity).
---- TISSUE SPECIFICITY: Expressed in petals and weakly in sepals but not in the column (gynostemium).
---- DEVELOPMENTAL STAGE: Expressed in mature flowers and not in young developing inflorescences or young floral buds.
----- SIMILARITY: Contains 1 K-box dimerization domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
